

One platform to run the hospital — AI + modular services

This flyer presents Health360: why it exists, what it aims to fix, and how hospital services connect on one patient journey — from OPD to lab, pharmacy, inpatient care, billing, analytics, and assets.

PURPOSE

Advertise Health360 as TechEarnest's ready hospital operating system.

AIM

Replace paper Rx, blind queues, and disconnected tools with one encounter spine.

BEHIND IT

AI-assisted workflows plus modular services across the complete hospital.

PATIENT JOURNEY

How care flows

Every step uses one UHID and one encounter hub — that is the Health360 architecture.

- 1 **Register & UHID**
Lifelong patient identity, profile, consent, and health timeline.
- 2 **Book · Arrive · Live OPD queue**
Appointments, desk or QR arrive, tokens, and visit status sync.
- 3 **Consult · Diagnose · E-prescribe**
Doctor workspace, catalogs, signed digital Rx, wellness, follow-up.
- 4 **Lab · Pharmacy · Imaging**
Hospital lab to report, send Rx to pharmacy, MAR, radiology & OT.
- 5 **IPD · Billing · AI · Assets**
Beds & ICU, invoices, health insights, biomedical & facility assets.

SERVICE MODULES

What Health360 manages

Each line is a hospital capability on the same clinical spine — not a separate product.

-  **Patient identity & portals**
UHID · 8 role portals · notifications · web + mobile
-  **Scheduling & OPD**
Book · desk arrive · live queue · tokens
-  **Clinical encounter hub**
Notes · diagnosis catalogs · vitals · checkout gate
-  **E-prescription & wellness**
Signed Rx · dosage templates · wellness · follow-up
-  **Laboratory journey**
Order · book · sample · verify · report ready
-  **Pharmacy & MAR**
Send Rx · dispense · inventory · inpatient MAR
-  **IPD · ICU · OT · billing**
Beds · nursing · theatre · encounter · invoices

UHID → OPD → Consult → E-Rx → Lab → Pharmacy → IPD → Assets

Remember

- Complete hospital OS — not one module
- AI for queues, context & lab trends
- One encounter = one clinical truth

Enterprise DNA

ServiceNow · Salesforce · Microsoft expertise — RBAC, audit, multi-hospital SaaS.

Connected ecosystem — Patient → Hospital → Lab → Pharmacy

Patient on mobile

Lab & pharmacy

INCLUDED

Hospital Asset Management

Biomedical, beds, facility & IT assets — clinical HMS plus asset visibility.
